Developed an application for electricity company technicians to streamline on-site service delivery, contributing to both front-end and back-end.
Technologies: IFS Mobile Workforce Management,, PL/SQL, Infrastructures (VDIs), MS-SQL, Git,Postman

Personal Project

Psychology Practice Management Platform

Developed a full-stack platform for psychologists in Brazil using Kotlin and Spring Boot (backend) and React with TypeScript (frontend). The platform enables therapists to manage patient records, schedule sessions, conduct video consultations, process payments, and access additional practice management tools. Also designed features with a strong focus on building a community of psychologists, fostering collaboration and knowledge sharing.
